

Attention

General Service Customer

As a commercial or industrial customer of Penelec in the Waverly District, you are being billed for your electric service under our Tariff Service Classification No. 3, General Service – Secondary.

A provision of this service classification requires the installation of a demand meter when your connected load being served equals 15 kilowatts or more, or when Penelec estimates that a demand greater than five kilowatts will be established. This determination of connected load or estimated demand will be made when your total consumption exceeds 1,500 kilowatt-hours per month for two consecutive months, but also can be made by Penelec at any time.

If your present load or an increase in your load meets the requirements of this provision, we will be required under our tariff to install a demand meter.

This information is provided on an annual basis to our General Service customers. If you need more information about your electric rate, please call **800-545-7741**.
