

# EV Driven Multifamily Program

## from Potomac Edison

EV Driven by Potomac Edison is making electric vehicle (EV) adoption more accessible, convenient and affordable in Maryland through an enhanced public charging network and incentives for residential and multifamily customers.

### What are the benefits of Electric Vehicle Charging in Multifamily developments?

- Tap into a growing, yet underserved, sustainable technology that can make your property stand out
- Use generous incentives to offset installation costs or contact us to learn more about utility-owned and operated solutions
- Attract and retain environmentally focused residents looking for EV charging options
- Incentives available for new and existing developments
- Charging stations that qualify for this program are ENERGY STAR® certified
- Support state-wide effort toward reaching 300,000 zero-emission vehicles on the road by 2025

Multifamily property owners can get a **rebate for 50% of the cost** to purchase and install qualified smart Level 2 and DC Fast Charging stations, up to \$20,000!

Limited number of Level 2 charging stations now available to be installed, owned and operated by Potomac Edison at multifamily properties within underserved communities.

### Eligibility requirements include:

- Electric service for property is provided by Potomac Edison in Maryland.
- EV charger is/will be networked via cellular connectivity.
- Property owner will allow Potomac Edison remote access to the usage data generated from the charging station on property.
- Agree to share the rate EV drivers pay to charge their vehicles periodically.
- Property owner must agree to easement for utility-owned charging station.
